DBMS – DATABASE RELATIONSHIP ANALYSIS USING JOINS

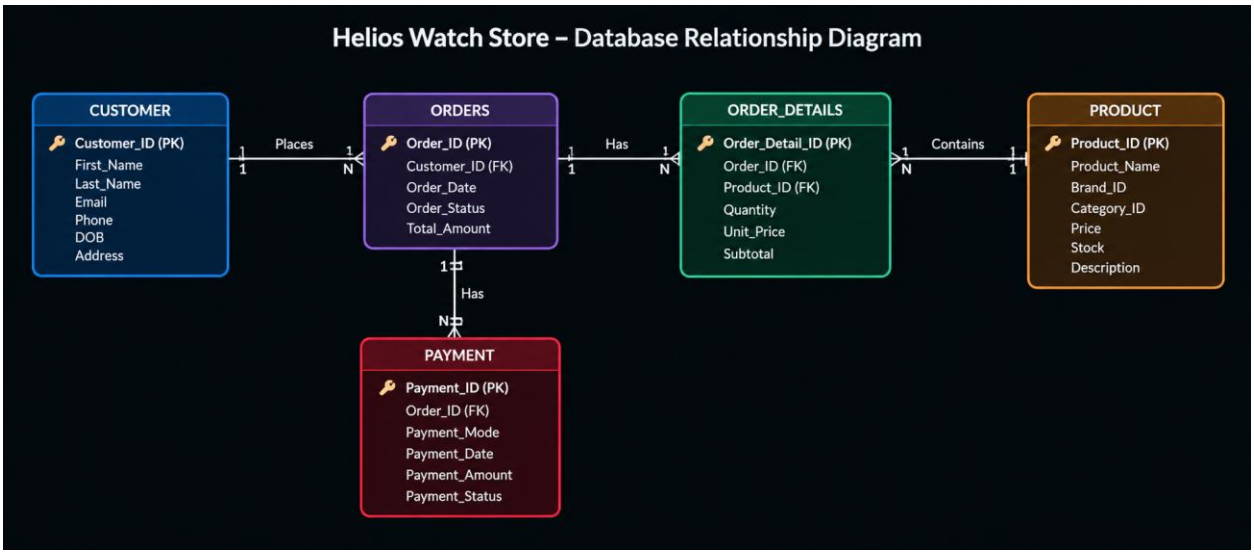

Project Title: Helios Watch Store E-Commerce Database

Skill Task: DBMS

Week: 8

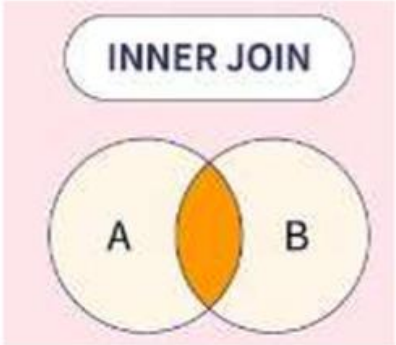

1.Combining Multiple Tables

The Helios Watch store database contains different tables that store customers, product, order, and payment information. The tables can be combined using JOIN operations to retrieve related information.

2. INNER JOIN

INNER JOIN returns only the records that have matching values in both tables.

2.1 Customer and Orders

```
SQL> SELECT c.Customer_ID,
  2         c.First_Name,
  3         c.Last_Name,
  4         o.Order_ID,
  5         o.Order_Date,
  6         o.Order_Status,
  7         o.Total_Amount
  8  FROM Customer c
  9  INNER JOIN Orders o
 10  ON c.Customer_ID = o.Customer_ID
 11  ORDER BY c.Customer_ID;
