

## Chapter – 3

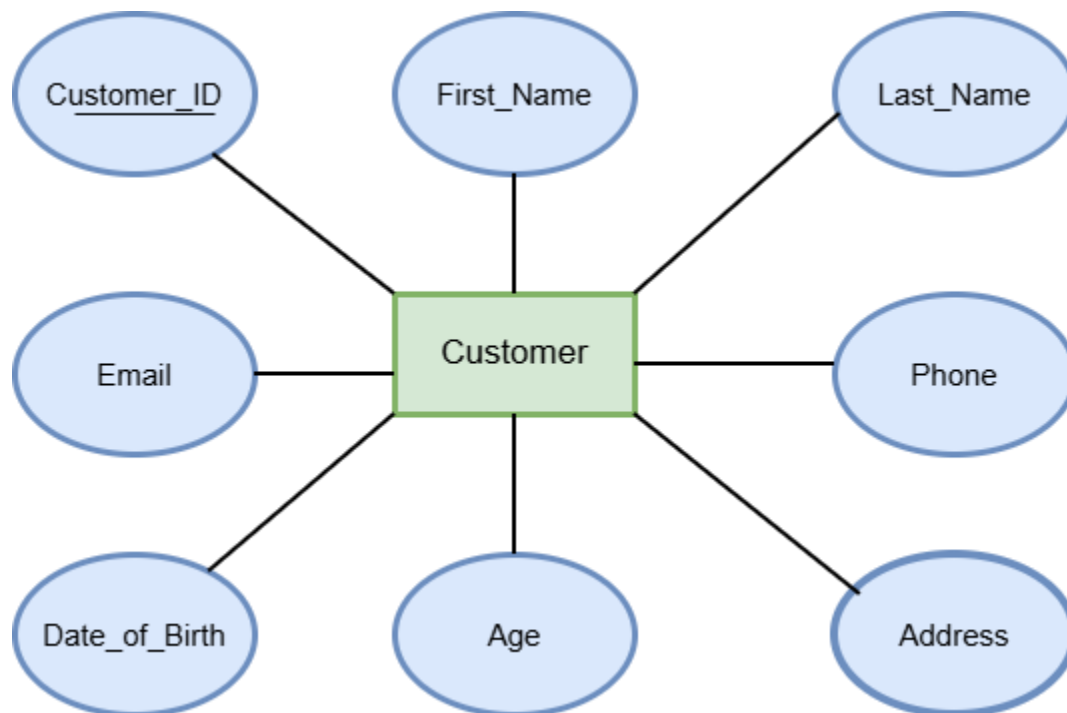

### Helios Watch Store E - Commerce Database

#### Introduction

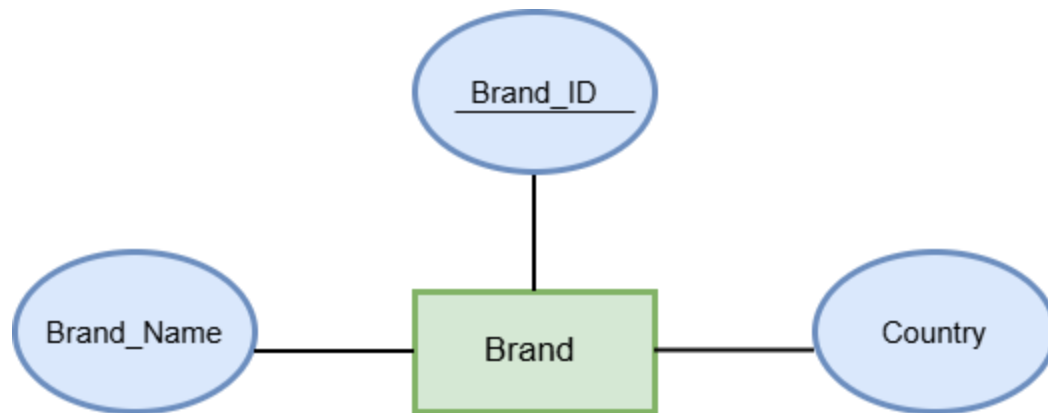

In this stage of the Helios Watch Store E-Commerce Database project, Entity-Relationship (ER) diagrams are created to visually represent the structure of the database. Each entity is illustrated with its attributes and primary keys, while the relationships between entities are identified based on business requirements. The relationships are further defined using appropriate cardinality and participation constraints to clearly represent the interactions among different entities within the system. The ER diagrams provide a conceptual view of the database, serving as a foundation for the relational database schema and subsequent database implementation.

#### Entity Relationship (ER) Diagram and Relationships

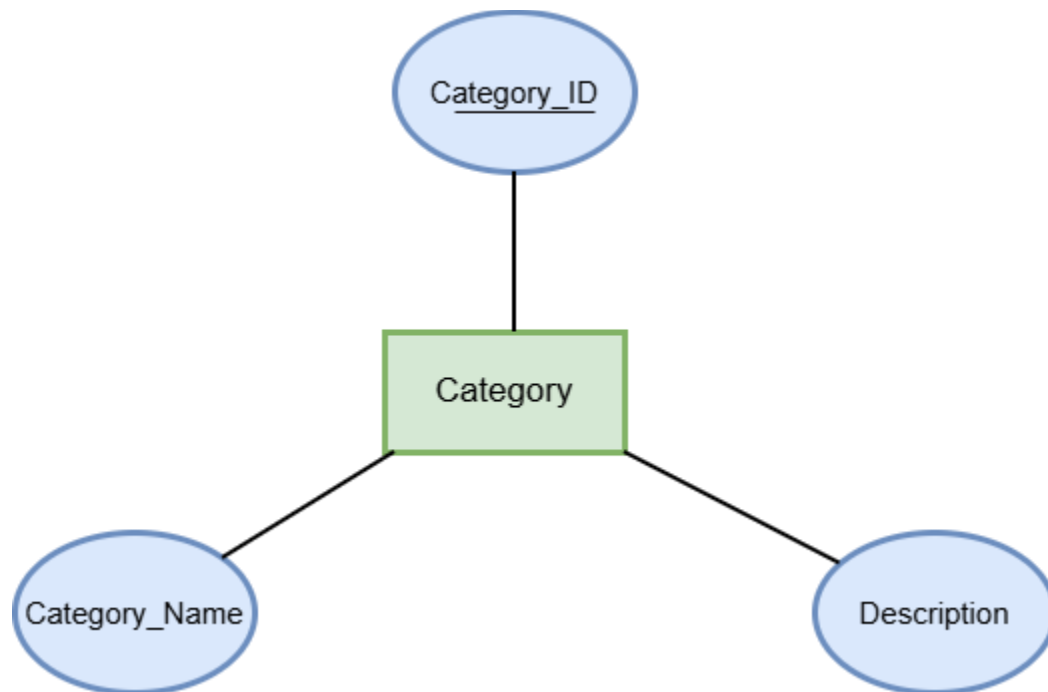

##### 1. Customer

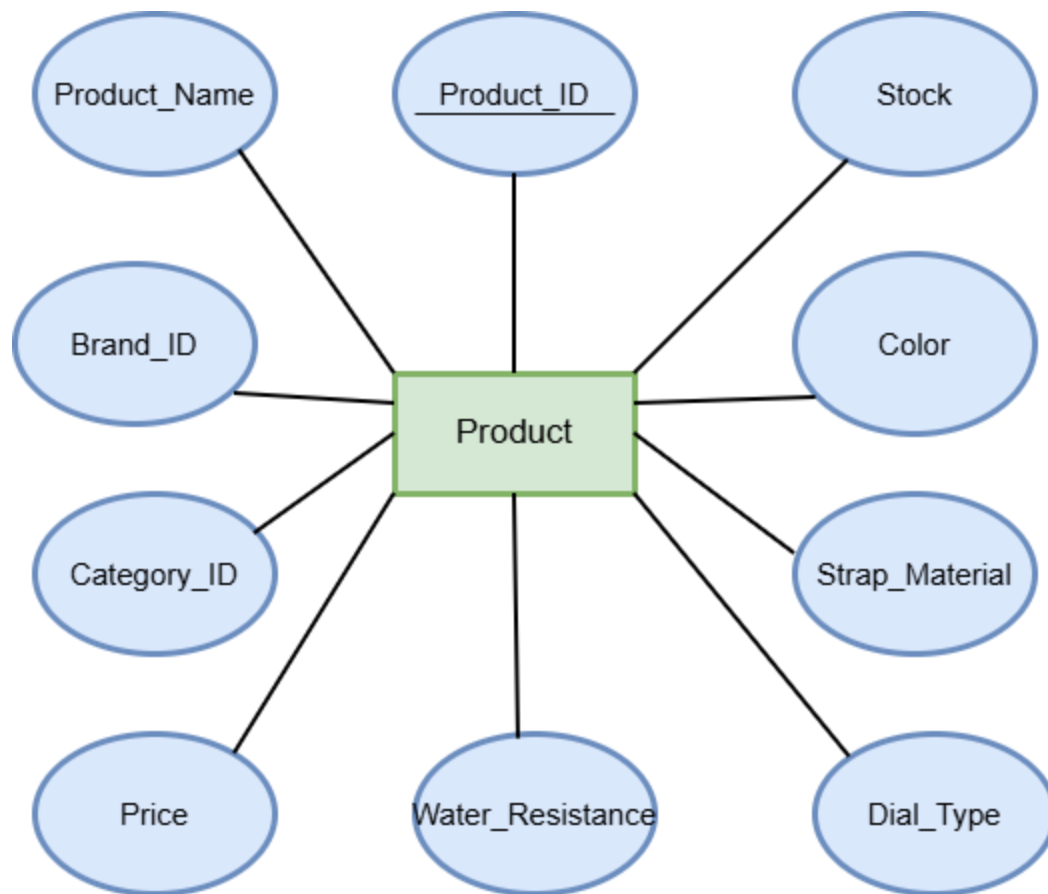

##### 2. Brand

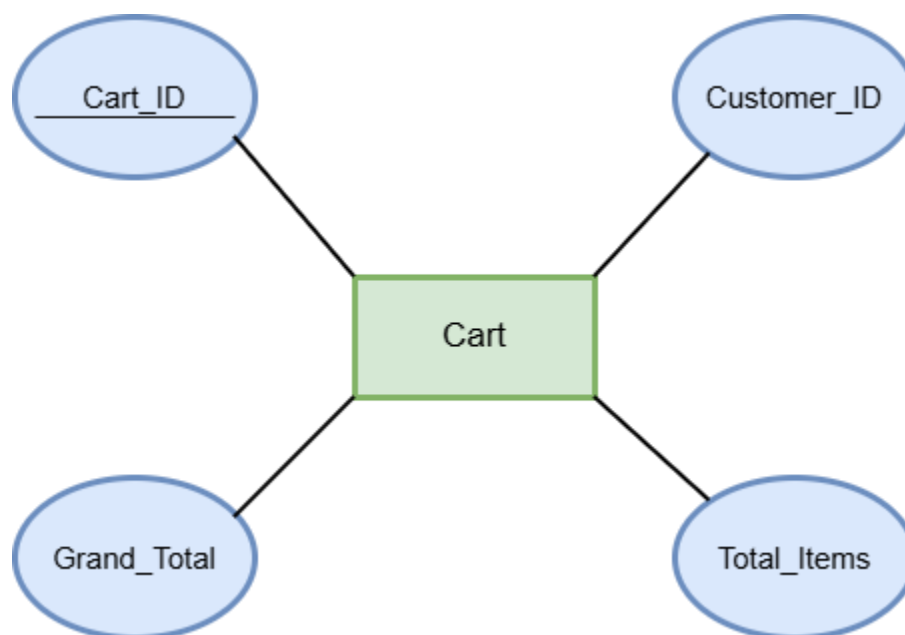

### 3. Category

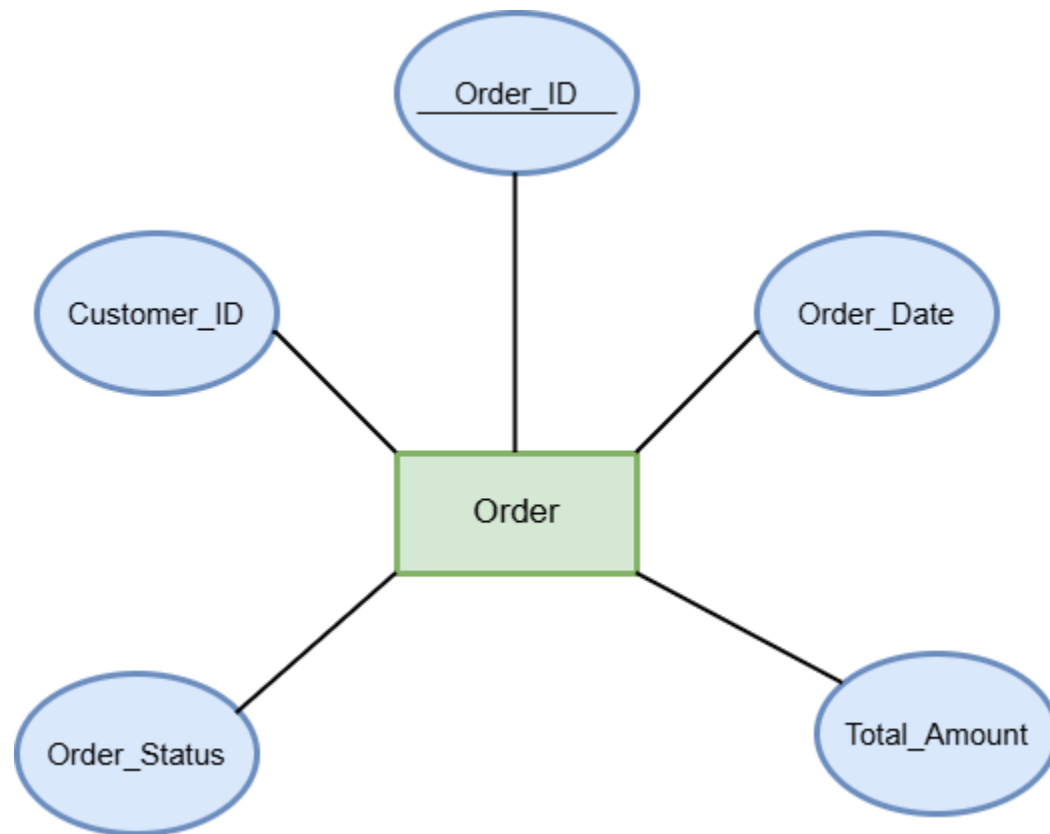

### 4. Product

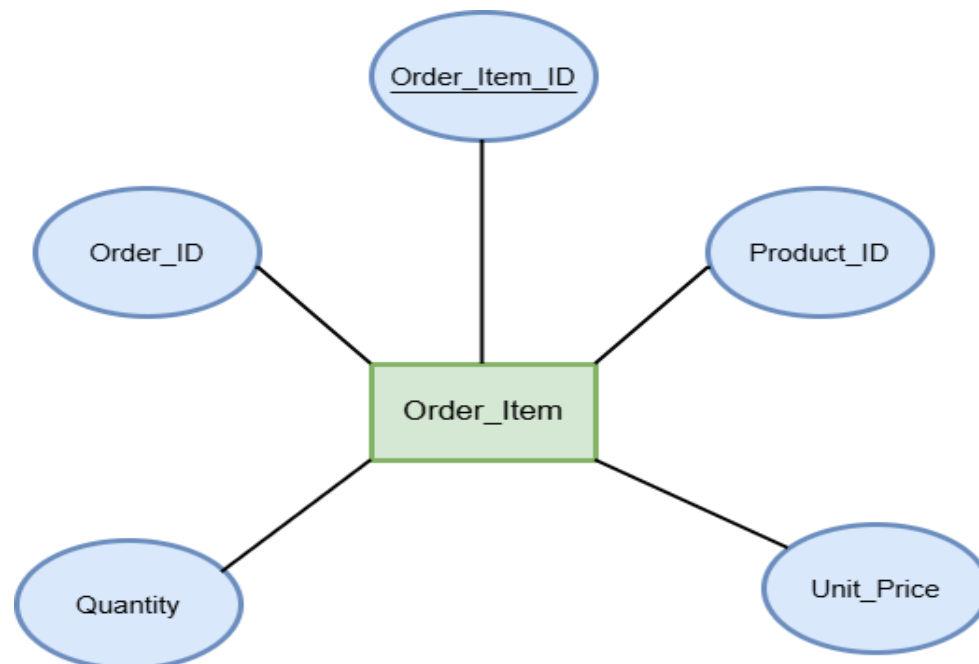

## 5. Cart

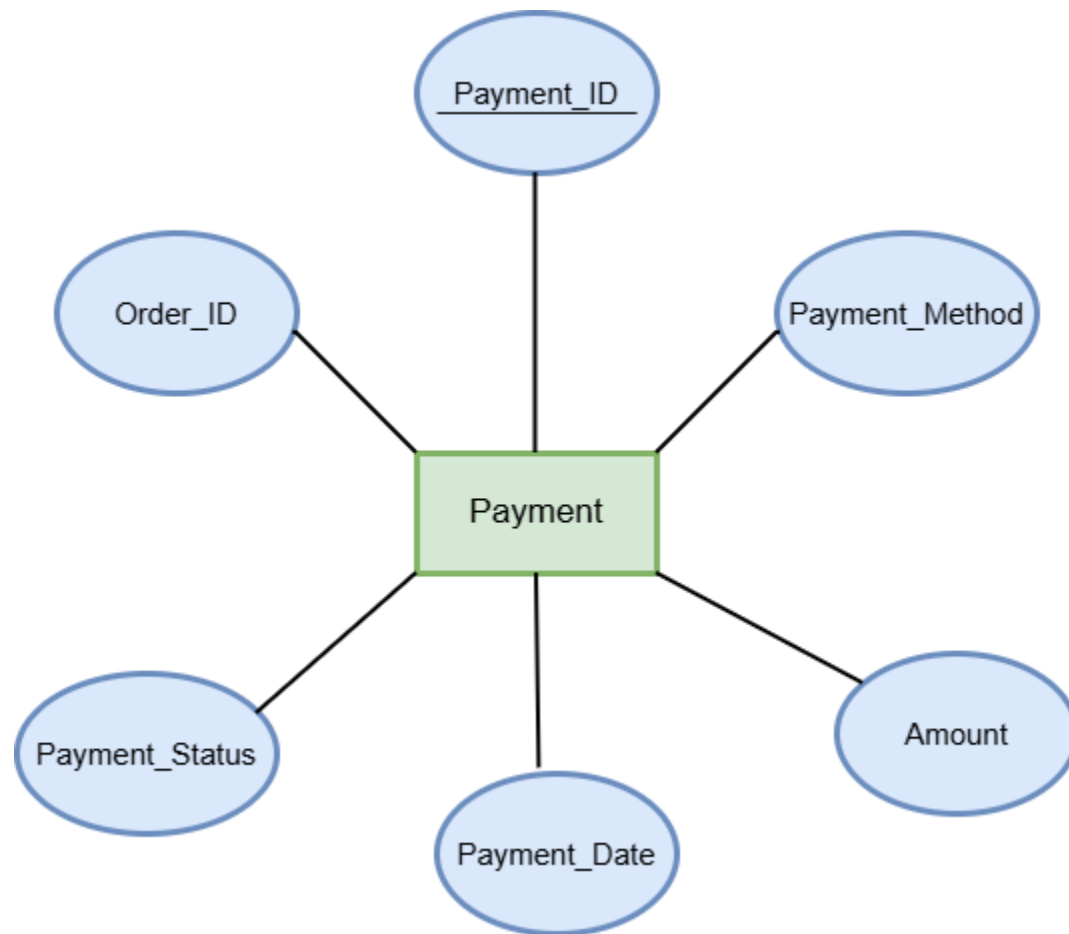

## 6. Order

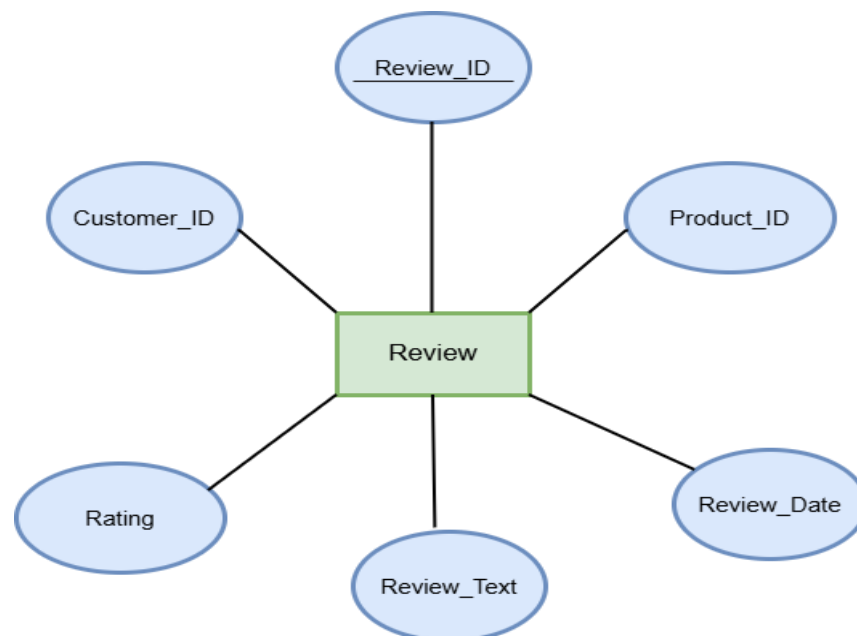

## 7. Order\_Item

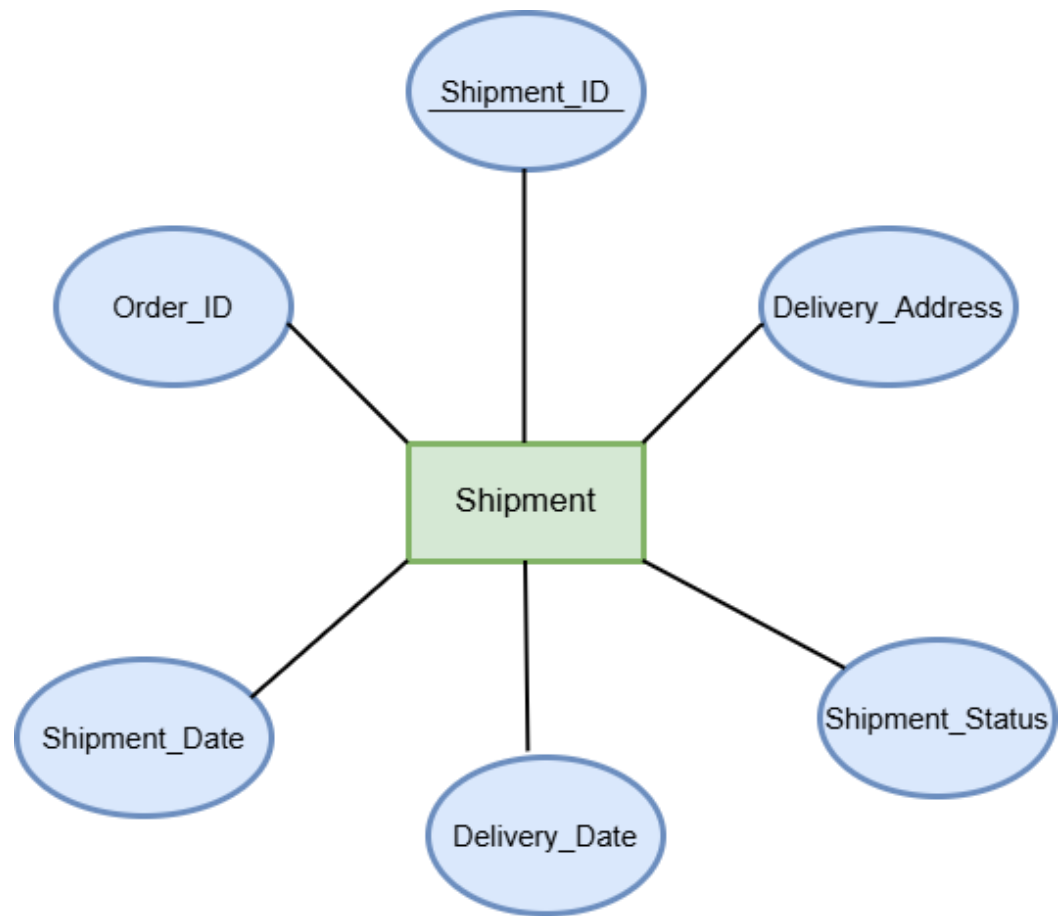

## 8. Payment

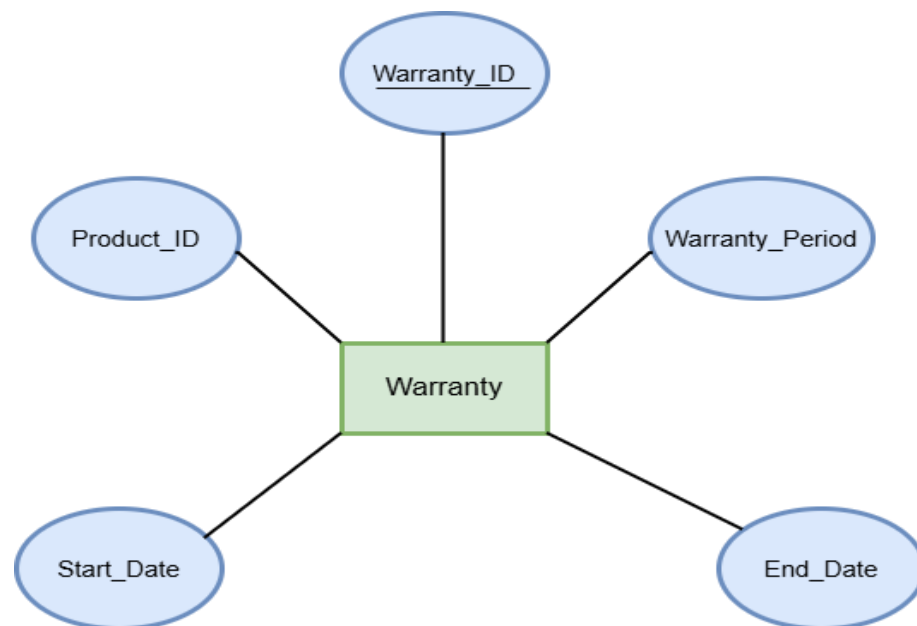

## 9. Review

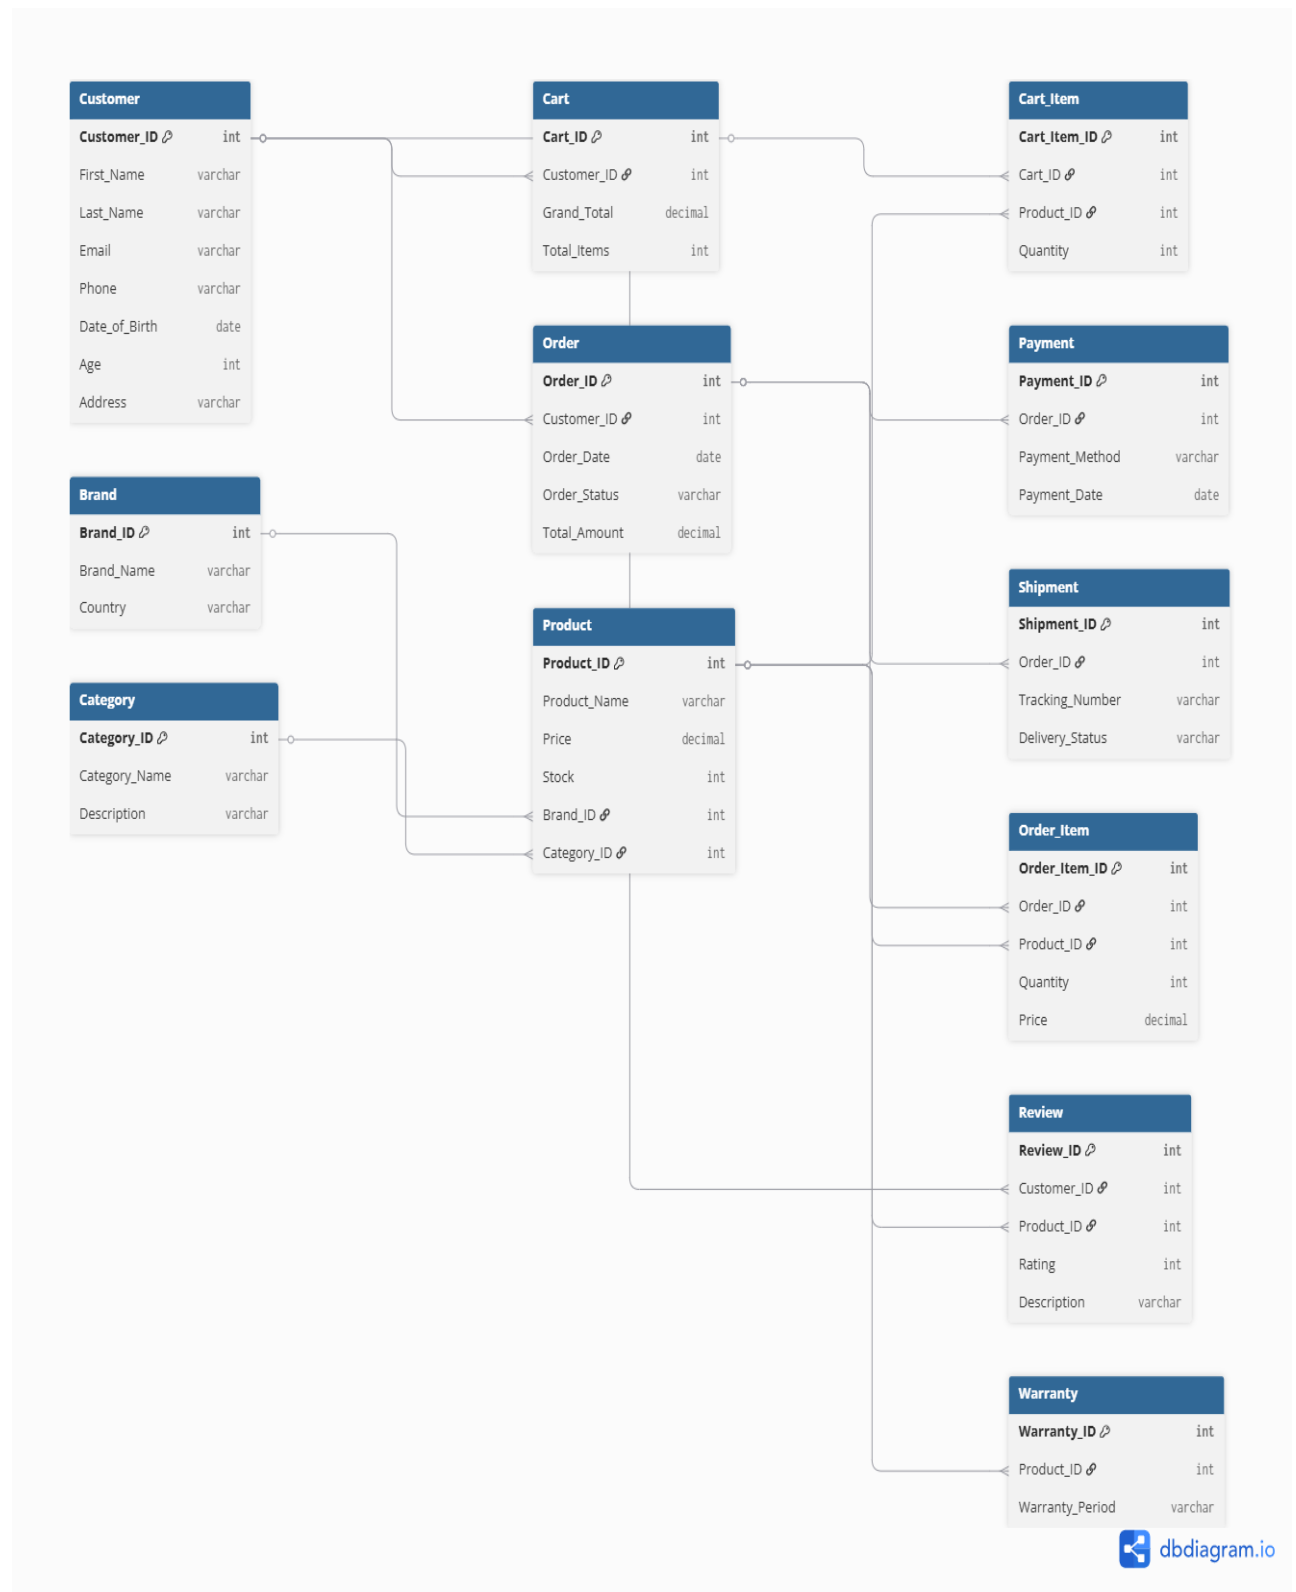

## 10. Shipment

## 11. Warranty

## Relationship

## Overall ER Diagram
